## HEPA Cover Maintenance Guide

## SOURCE:

https://support.zortrax.com/hepa-cover-maintenance-guide/

Maintenance work should be regular in order to keep the device in good condition. Some parts require maintenance every few hundred working hours and some periodic replacement. All maintenance activities do not take much time and are not complicated. Before commencing any repair, turn off the device and let it cool down. Remember to always wear safety gloves and glasses.

The following table presents maintenance and repair guidelines connected with each section of the HEPA Cover, together with specific check points, necessary activities and their frequency.

The following manual shows the HEPA Cover 200 maintenance work. For the HEPA Cover 300, these procedures are the same.

ACTIVITY	FREQUENCY	SOLUTIONS TO THE PROBLEMS	ENECESSARY ACCESSORIES
Cleaning the cover's	_	Wipe the cover's	
frame on the outside		frame with a soft, wet	
		cloth. Do not use	
		detergents	
Checking the degree	Every 500 working	Check if the filters are A vacuum cleaner,	
of wear of the filters	hours	clean. If the filters are compressed air	
and if it's necessary,		considerably dirty,	
cleaning them		clean them using a	
		vacuum cleaner or	
		compressed air	
Cleaning the filter	Every 500 working	Remove both filters	A vacuum cleaner,
module fan	hours	and clean the fan	compressed air
		using a vacuum	
		cleaner or	
		compressed air	
Replacing the HEPA	Every 3 – 4 months	Remove the old filters New filters set	
and carbon filters		from the module and	
		install new ones
